TWO WAY MIRROR FILM BROCHURE

Without Film

With Film
What is a two way mirror?
No, it is not magic. It's SCIENCE!

A two way mirror, also known as a one way mirror, is a semi-transparent mirror that is traditionally made for privacy and security purposes. It is made on a grey glass substrate and the mirror coating is baked on during the manufacturing process.
Advantages of Two Way Mirror Film

Transform an existing window into a two way mirror with film. Two way mirror film blocks 95% of light and delivers the highest level of privacy. During daytime, sunlight creates glare on the surface of the mirror, making it impossible to see inside. From inside, you are still be able to see outside. During nighttime, the privacy offered by sunlight is gone, so we recommend that you install lighting outside the window to create glare.

Applications

- Schools
- Home Privacy
- Dance Studios
- Store Security
- Glare Reduction
- Office Privacy
- Jails & Prisons
- Interrogation Room
- Hidden Camera
- Market Research
- Clinical Observation
- Stage Effects
- Infinity Mirror
- Safe Room

Product Features

- Maximum Size: 6ft x 100ft
- Maximum possible privacy (5% transparent)
- Turns Clear Glass into a Two Way Mirror
- 80% reflective, 5% transparent, blocks 99% UV Light
- Easy to install, thicker than most films on the market
- Cuts with scissors
- Inexpensive alternative to the Glass Two Way Mirror
- Improves Energy Efficiency
- Is carefully packaged and fully insured
Custom sizes cut to order

Use our Online Price Calculator to order the exact size mirror film you need for your project.

Order Film Rolls

- 36in x 24ft
- 36in x 249ft
- 36in x 100ft
- 48in x 25ft
- 48in x 50ft
- 48in x 100ft
- 60in x 25ft
- 60in x 50ft
- 60in x 100ft
**EASY STEP-BY-STEP INSTALLATION PROCESS:**

1. Trim film
2. Spray the film solution
3. Lay film on glass
4. Smooth with squeegee
5. Trim excess film with razor

How to...
Install Mirror Film
Examples of Observation Rooms

We have all seen a cop drama TV show or film in which a criminal suspect is interrogated while police watch from behind a mirror. Why can’t the suspect see those watching him behind the mirror?

The answer lies in the level of lighting in both rooms. The room the suspect is in is kept very brightly lit, so that the light in the room reflects off the mirror’s surface. The observation room containing the police, on the other hand, is kept dark, so that little to no light gets through the glass.

As a result, the suspect sees only his own reflection and the police see into the suspect’s room clearly. If the lights in the suspect’s room were suddenly turned out, or the lights in the observation room suddenly turned on, then the two way mirror would become a window.

Although the film blocks 95% of light at night, because the light is reversed, you may see through the window depending on the amount of light on the other side. We suggest ordering samples for testing.
Questions? We've got answers

With 20 years experience manufacturing two way mirrors, our team of engineers & glaziers has the expertise to quickly and accurately answer any questions you have.

I’m James, sales engineer for Two Way Mirrors.
